

Creating Your API Documentation!

Requirements

1. Include Any Authorization information for connecting to your API!
 - a. Is there an API Key?
 - b. Are there rate limiting restrictions,etc.
2. Include a description of your two endpoints and the parameters which they take.
3. Include a sample Request for each endpoint
4. Include a sample response for each endpoint (it will be best to form this in a tool like postman)
5. Include anything else you think is important! Think of this as you pitching an API to your team at work , what does the team need to know about this API to safely accept it and add it to there application.
